

DEPARTMENT OF BIOTECHNOLOGY

CERTIFICATE

Certified that the project entitled “**ROLE OF NON-CODING RNAs IN CARDIOVASCULAR DISEASES**” carried out by **Ms. Megha RD, Ms. Mounika Rao, Ms. Nidhi Hookeri and Ms. Shruthi Selvaraj** bearing University Seat Number **1MS15BT021, 1MS15BT024, 1MS15BT028 and 1MS15BT048** respectively, bonafide students of **Department of Biotechnology, Ramaiah Institute of Technology, Bengaluru** in fulfillment of the **Mini Project** under the affiliation of **Visvesvaraya Technological University, Belgaum** during the year 2015-2019. It is certified that all corrections/suggestions indicated for the internal assessment have been incorporated in the report. The project report has been approved as it satisfies the academic requirements in respect of Project Work prescribed for the said degree.

Date: 02-May-2018

To Whom It May Concern

Certified that the project work entitled **“Role of non-coding RNA in Cardiovascular diseases”** was carried out at Shodhaka Life Sciences Pvt. Ltd. by **Ms. Megha R D** [USN No.:1MS15BT021], **Ms. Mounika Rao** [USN No.: 1MS15BT024], **Ms. Nidhi Hookeri** [USN No.:1MS15BT028] and **Ms. Shruthi Selvaraj** [USN No.:1MS15BT048], students of Ramaiah Institute of Technology, Bengaluru, an autonomous college affiliated to Visvesvaraya Technological University in partial fulfillment for the award of B.E Biotechnology, from 1st February 2018 to 02nd May 2018. It is certified that they have completed the project satisfactorily.

APPROVAL FOR SUBMISSION

I certify that this project report entitled "**ROLE OF NON-CODING RNAs IN CARDIOVASCULAR DISEASES**" was prepared by Megha RD, Mounika Rao, Nidhi Hookeri, Shruthi Selvaraj, bonafide students of Department of Biotechnology, Ramaiah Institute of Technology, Bengaluru in partial fulfillment of the requirements for the award of Bachelor of Engineering in Biotechnology under the affiliation of Visvesvaraya Technological University, Belgaum during the year 2015-2019. It is certified that all corrections/suggestions indicated for internal assessment have been incorporated in the report deposited in the departmental library. The project report has been approved as it satisfies the academic requirements in respect of Mini Project Work prescribed for the degree.

ACKNOWLEDGEMENTS

We would like to express our gratitude to our External Guide Dr. Kshitish Acharya K, PhD, Founder director of Shodhaka Life Sciences Pvt. Ltd. (Shodhaka: www.shodhaka.com); also, a Faculty scientist at the Institute of Bioinformatics and Applied Biotechnology (IBAB), Bengaluru and our Internal Guide Prof. Sravanti V, PhD, Department of Biotechnology, Ramaiah Institute of Technology, Bengaluru, who provided us the opportunity to work on this project and constantly supported us. We would also like to thank Mr. Akhilesh, Ms. Sravanthi Davuluri, Ms Sitha, Ms Moushumi and Ms Nandita from Shodhaka Life Sciences Pvt. Ltd. for imparting their knowledge on hands-on use of Bioinformatics and how to go about the project which has been crucial for the progress of this project. We express our sincere thanks to the Head of Department of Biotechnology, Dr. Bindu S, our project coordinators Dr. Sravanti V & Dr. Prabha M and the Department of Biotechnology for giving us an opportunity to experience this work.

ABSTRACT

World health organization (WHO) had estimated 17.7 million deaths due to cardiovascular disease (CVD) worldwide in the year 2015. 7.6 million of these deaths were due to Coronary heart disease in particular, with Myocardial Infarction (MI) being the main manifestation of CVDs. Most research work is focused on finding a cure for MI, however, minimal research is done on deducing the pathway involved in MI and determining biomarkers that could indicate the probability of suffering from MI well before its onset. Recent discoveries prove that ncRNAs have the ability to affect the translation and stability of mRNA and also regulate gene expression. Although individual studies have been done to identify ncRNAs that are involved in MI, no such mass scale bioinformatics study has been done for meticulous determination of a particular ncRNA that plays a significant role in triggering pathways that lead to MI. This study is aimed at retrieving biological molecules reported to be significant in causing the disease, by performing a detailed analysis on the data collected and drawing a logical relevance between the differential expression of ncRNAs in healthy and diseased humans. Standard and comprehensive search techniques were used to efficiently collect relevant papers on PubMed. The 2,247 papers thus obtained, were thoroughly biocurated to obtain biological molecule data reported in the cases of MI and were further cumulated systematically in MS Excel sheets. This intricate screening technique helped in the retrieval and standardization of 84 non-coding biomolecules from 174 individual papers and 117 coding biomolecules from 194 individual papers. These biomolecules have been found to show differential expression when compared in healthy and diseased MI patients. Further research on the identified non-coding and coding biomolecules can determine their future as potential biomarkers that can help mitigate or delay the progression of MI. According to our study, the coding molecules that are most used as biomarkers in MI are Interleukin and Toll-like receptors and the non-coding RNAs most used as biomarkers are miR-133 and miR-208
